Wm. Mulholland Says Van Nuys Is Menanced

He says, "I have seen such a storm that if the like occurs again, the mud will flow down the chimneys of Van Nuys"

A. P. Davis Says:

In his report on the Pacoima dam at "elevation 1,800 above sea-level will be provided a service gate controlled by a balanced valve 30 inches in diameter from which a pipe will be extended to the main of the city water supply about 1,100 feet distant. This valve will normally be open, so that whenever water stands above in the reservoir, it will be feeding under pressure into the city mains, and pass into the San Fernando Reservoir if not consumed on the way"

The San Fernando Valley Taxpayer Says:

"This is at least 6,000 acre feet of water added to the city reservoir system, that will produce to the city annually at irrigation rates $36,000.00, or over 7 per cent. on the cost of the additional $500,000 which the Los Angeles Flood Control District asks to be raised for the $1,500,000 dam. Why should not the Water Board of the City of Los Angeles put up this $500,000.00? It takes annually a like amount in net irrigating rates from the Valley; why should we tax ourselves another $40,000.00 a year when the whole city is going to make annually $36,000.00 out of us?"
